

Evoca presents its first ISO-certified Product Carbon Footprint Tool: reliable data to support informed sustainability decisions.

For Evoca, sustainability is grounded in certified data, transparency and responsible innovation in service of customers and partners.

The Group announces the launch of its **Product Carbon Footprint Tool (PCF)**, an advanced solution certified in accordance with the international standard ISO 14067:2018. The tool is designed to provide consistent and verifiable measurement of product carbon footprints across the entire life cycle.

The value for customers is immediate and measurable: the PCF Tool provides access to accurate, certified data that are essential for the reliable calculation of Scope 3 emissions. This enables organisations to move beyond the use of average factors and generic estimates, improving the quality of ESG reporting and supporting more informed decision-making, both at the procurement stage and in the management of sustainability strategies. In practical terms, customers can integrate reliable data into their sustainability reports, respond more effectively to regulatory requirements and market expectations, and identify opportunities to reduce emissions across the value chain.

Recently certified, the tool represents a key pillar of the Group's Product Stewardship strategy. Its outputs are integrated into product development processes, helping to guide design choices aimed at reducing environmental impact while improving Total Cost of Ownership in terms of efficiency, durability and performance.

This launch forms part of a structured journey through which Evoca has progressively strengthened its ESG commitment, translating it into concrete, measurable and verifiable outcomes. The international certifications achieved across environmental, quality, health and safety domains, together with independent recognitions, confirm the consistency of this approach and its alignment with established global standards.

Within this context, Evoca further strengthens its position in the vending and professional coffee sector, contributing to its ongoing evolution. By making advanced tools and reliable data available, the Group supports customers and partners in developing more rigorous and transparent decarbonisation pathways. An approach aimed at delivering tangible value across the value chain and supporting the transition towards more sustainable operating models.
